

We are seeking a periodontist wishing to associate with our large-volume practice to develop systems for and to provide dental implants and regenerative therapies (soft and hard tissue). In 2022, this 30-year-old practice merged the continuing care patients from a retired periodontist. It is now the only other practice serving a metropolitan area of over 400,000, working with over a hundred referring dentists.

Located in a well-appointed 4000 sq. ft. free-standing building with six operatories, it is convenient to interstate and major highways. Technologies include Dentrax practice management system (chartless), Florida Probe Voice Works, Dexis radiograph management system with sensors and ScanX, iCat cone beam with TX Studio, Overjet AI, LANAP and other systems for efficiency. Staff members have extensive experience in the business and clinical operations of the practice.

Compensation and benefits are negotiable and a path to ownership is available. This is an excellent opportunity to build on a long-standing legacy of periodontal care to the community with expectation of a sound financial return.
